## PREFACE

This study of eighteenth-century geography books published in the British Isles and United States began some years ago when I was an associate rare book librarian at the Kenneth Spencer Research Library, University of Kansas. The Library had an extensive collection of 18th-century English books which included some editions of the Guthrie and Salmon geographies. In my naivete I began searching for a bibliography of such works as a cataloguing aid, as I was particularly interested in the maps they contained. When it finally dawned on me that none existed, the germ of the current project took hold. Someday, I would write it.

At that time I had no conception of the scope of the research, nor the time it would consume. It simply seemed to cry out to be done, and looked to be a straightforward task. I stored the idea away but took no action until some years later, when I was working as a reference librarian in the library of Purdue University in West Lafayette, Indiana. That library had no separate map collection and virtually no pre-1900 maps, a frustration for me. Casting about for a spare-time project which would keep me involved in the map world, the old idea surfaced. At about that time, in a lovely bit of serendipity, the Lilly Library of Indiana University, in Bloomington, offered one-week fellowships to Indiana librarians who could come up with a fitting project. I leapt at it, submitted a proposal, it was accepted, and I spent a fruitful week immersed in that wonderful library, setting the scope and devising a methodology. The project as outlined has varied little in the years since. As it now stands, it includes any book with maps (other than atlases, which have been well studied) concerned with the geography of the world or a major portion thereof (i.e. no geographies of single countries), published 1700-1800 in the British Isles or North America. The scope embraces geographies, gazetteers, geographical dictionaries, historical geographies, and larger works containing separate sections on geography.

The journey from that week in the Lilly Library in 1977 to the present publication has been at times tedious and frustrating but mostly great fun. Since no bibliography of geographical works then existed<sup>1</sup>, let alone any guide to their maps, the first order of business was to compile a list of likely titles. In those distant, pre-Eighteenth Century Short Title Catalogue (now titled the English Short Title Catalog, ESTC) days, that meant slogging through the card catalogues of many libraries, finding clues in subject headings and keeping on the trail of known authors. The arrival of the ESTC has been the single

most helpful event in the completion of the finished list, and without it I would undoubtedly have missed many appropriate entries. Even with its help I am sure I have missed some; I hope not many. It seemed quite miraculous to be able to sit at a terminal, search under the single term "geograph#", and see title after unknown title pop up on the screen. With the excellent ESTC collations, which led me to books with maps and allowed me to avoid those without any, and the good title transcriptions, my list expanded. And as more and more libraries added their holdings, elusive volumes were located. Ninety-nine percent of the titles in this bibliography can now be found on the ESTC, and when present the ESTC number is given for each entry, rather than noting the libraries in which I examined the item. The ESTC entry includes the symbols for all reporting libraries and usually gives the call number of the item at each institution. This last has saved me hours of work.

I decided at the outset that seeing only one copy of a book would not be sufficient. Some volumes had lists of maps to be included; some didn't. Therefore it seemed important to examine several copies of a work to be sure that the corpus of maps was standard. As a result, I have tried to see at least three copies of every title/edition, and for the most part I was successful; I have examined more than 2,000 books. Even with the invaluable help of the ESTC it has not been possible to locate three copies of every title/edition. Some titles have been available in only two, or even one extant copy, and as a result my information for such items was limited. Some have not been located at all. Are they ghosts? Did an enterprising publisher bring out, for example, the 7th edition of a work, just to make it seem up-to-date, when no 6th edition had ever been issued? Or have the missing editions truly vanished? Gaps in the record are duly noted. Sadly, in every library I have found copies of a desired book which has had some or all of its maps removed. While many 18<sup>th</sup> century books are now in special collections, for too long many were on open shelves, making the books easy prey for thieves.

Except for a handful of quartos and small folios, which I think of as 18th century coffee-table books, most of the books in this carto-bibliography were octavos or even duodecimos, designed for students and those members of the increasingly literate public interested in geography and history but not wealthy enough to purchase the larger, more expensive geographies and atlases. Many of the books were quite literally worn out from use, or became out-of-date and were discarded. When they turn up in antiquarian book stores or dealer's catalogues they are rarely in fine condition. Even those copies which have found their way to the sanctuary of a library are often worn and dog-eared. This

evidence of use leads me to believe that, small and unimpressive as they were, these geographies nevertheless shaped the geographical world vision of countless readers in the British Isles and the United States.

Size alone, of course, is no indication of importance. A far better indication of that can be found in a look at the publication history of books of a geographical nature, which this study makes possible. In the first decade of the 18<sup>th</sup> century, eighteen books were published. By mid-century, the decade 1751-1760, the total had risen to 38. Numbers rose rapidly after that, culminating in 136 such titles 1791-1800, a nearly 500% jump, reflecting both an increase in interest in the subject as well as an increase in literacy.

It is also instructive to examine the nature of the geographical books which were published, as reflecting the culture of the times. In this study of 470 titles/editions, three main areas of readership were identified. The earliest was for students of the classics, which in the 18<sup>th</sup> century were still the backbone of the educational curriculum. Six of the eighteen books published in the first decade were titles of this nature. New editions of such classical authors as Pomponius Mela and Dionysius Periegetes were published throughout the century, as were books titled, e.g. *Geographia Classica*, or *Geographia Antiqua*. Children were another major publishing target. Books with titles such as *Geography Made Familiar and Easy*, or *Geography for Children* went through as many as twenty editions. Other titles, as *Geography for Youth*, *Youth's General Introduction*, or even *The Young Gentleman and Lady's Geography* were meant to appeal to families with children out of the nursery but not yet in University. For the latter, the 20 editions of Patrick Gordon's *Geography Anatomiz'd*, 23 editions of William Guthrie's *New Geographical . . . Grammar* and 25 editions of Thomas Salmon's similarly titled text sufficed. A practical business man might satisfy reference needs with one of the gazetteers, which published geographical information in alphabetical format. For the affluent, handsome quarto and folio volumes were furnished with large, fold-out maps, elegantly engraved.

The maps, of course, are the focus of this book, and examining them has led to some interesting speculation. Who controlled map plates? What was the trade in plates? Maps in Richard Turner's *View of the Earth . . .* London 1762 [entry **390**] were subsequently used in Daniel Fenning's *New and Easy Guide . . .* London 1770 [entry **96**]. Where were they in the intervening eight years - in the stocks of publisher Stanley Crowder? The maps in Robert Dodsley's *Preceptor*, Dublin 1749 [entry **85**] were used in the 1760

Dublin edition of R. Martin's *Geography methodised* [entry **264**]. They must have been stored somewhere in Dublin. The plates from John Seally's *Complete Geographical Dictionary*, London 1783 [entry **380**] were used in the very odd 1795 publication of William Guthrie's *Guthrie's Universal Geography Improved* [entry **187**], with no apparent tie between publishers. Even more puzzling was the appearance in the Dublin 1771 edition of Guthrie's *New Geographical . . . Grammar* [entry **177**] of the plates from the 1754 London and final edition of Patrick Gordon's *Geography Anatomiz'd* [entry **150**]. Many maps in Irish books were close copies of those in the English editions, but these are from the original English plates. Were the plates obtained from England, or was it a pirated edition printed in England? And in what seems clear evidence of the value of map plates, a J. Rice, in Dublin, published an edition of Daniel Fenning's *New and easy guide to the use of the globes* in 1796 [entry **102**]. Rice apparently emigrated to the United States soon thereafter, as a "Rice and Co. Market-Street" published *Du Fresnoy's geography for youth* in Philadelphia [1799? entry **246**]. The same map of The World appeared in both the Dublin and Philadelphia books; Rice took it with him on the long sail west.

What is the purpose of this carto-bibliography? I see it as two-fold. I hope it will add to our knowledge of the work of English and American mapmakers. Many of the most important map makers of their time prepared the maps for these geographies, and that aspect of their work is little known. And as more and more 18<sup>th</sup>-century books disappear and others are disbound for their illustrations and maps, I would hope the book will help identify maps long detached from their moorings.

The four indexes should be among the most useful parts of the book. The geographic index shows the wide range of areas covered; the name index lists every cartographer/engraver whose name appears on the face of a map; and the two publisher indexes list the name of every publisher connected with a book alphabetically as well as chronologically. This should be valuable for researchers of 18<sup>th</sup> century British publishing history. For much of the century multiple publishers/booksellers names appear in the imprint, but no catalogue contains, for example, the complete list of twenty-three names on the imprint of Richard Brookes' *General Gazetteer*, London 1800. This bibliography does.

A work of this nature is the result of research in many libraries. As might be expected, the large national and institutional libraries held the most of my sought-for titles, and I spent many happy hours mining the riches of the Library of Congress and the several

libraries at Yale and Harvard Universities. In England the British Library was the most fruitful for me. Often, however, libraries with smaller holdings of 18th-century geographical works turned out to have titles/editions not found elsewhere. All told, the course of my research led me to over 100 libraries in 20 states, 4 Canadian provinces, England, Ireland, Scotland, and Wales - and even, with e-mail, to libraries in South Africa, Australia, and New Zealand. Most of these were visited in person, and I was met everywhere with courtesy and consideration. It is not possible here to acknowledge all those dedicated and helpful librarians who assisted in the work. They are legion, and I owe them a great debt.

I have already noted the help received from the grant given by the Lilly Library. I owe thanks also to a grant from the Special Libraries Association, which made it possible for me to visit a number of libraries, and to Yale University, which awarded me a summer's research leave.

Despite all of the help I have received, there will be errors, for all of which I am solely responsible. *Mea culpa*.

## INFORMATION FOR USERS

Eighteenth-century book titles are notoriously long. Since this work is concerned primarily with the maps in the books, and only secondarily with the books themselves, complete book title transcription has not been attempted. Three elipsis points (...) indicate omitted wording; distinctive phrases and edition statements are included, and imprints are given in their entirety, which it is hoped will be an aid to future studies of the 18th-century publishing trade. Map titles are complete unless extraordinarily long, in which case enough information is entered to make positive identification possible. Spelling and punctuation is exact except that periods are supplied at the end of titles if they are lacking. As capitalization in the 18th century tended to be erratic, only proper nouns are capitalized.

The organization of this cartobibliography is alphabetical by author/title, and chronological within titles. When no author can be identified, entry is by title. In general, works published in England are listed first, followed by those published in Scotland, Ireland, and the United States.

The intention has been to include the title transcription and every geographical name, and every personal name, wherever found on a map. A forward slash (/) is used to differentiate information found other than in the title cartouche. As an aid to identification of individual loose maps, the following list of abbreviations has been used:

TL (top left)	ab (above border)
TR (top right)	bb (below border)
BL (bottom left)	ob (outside border)
BR (bottom right)	bc (below cartouche)
TC (top center)	bh (between hemispheres)
BC (bottom center)	bbr (between border rules)
	inl (inside neat line)

Example: An exact map of England. /I. Harris sculpt (BR,inl), indicates that "An exact map of England." is the complete title, and "I. Harris sculpt" is found in the lower right-hand corner of the map, inside the neat line. Map measurements record height followed by width to the nearest cm., i.e. 10 to 10.4 cm. is recorded as 10cm., 10.5 to 10.9cm. is recorded as 11cm.

Measurements of particular copies may differ slightly, due to the vagaries of humidity and storage conditions.

### **Bankes, Thomas.**

Uniform Title: *New, royal, and authentic system of universal geography.*

NOTE: The geographical works of Thomas Bankes are a bibliographical nightmare. The close similarity between the various title-pages of Bankes's work and those of Charles Middleton suggest that Bankes intended his work to be a successor to Middleton's. Not only the title-page is similar; 13 maps are from the same plates. The NUC and BL catalogues give conjectured dates from 1787 to 1810, the ESTC from 1788-1797. Since none of the editions carries a date on its title page, dating must be inferred from internal evidence. From a prospectus published in 1793 for "a new edition" to be published "Saturday next," we know that at least one edition came out before that date, and from internal evidence several editions were probably published between 1787-92.(1) The work came out in parts, as did other folio geographical works of the period. Some copies were bound in one large folio. Some are found in two volumes, with two separate title-pages. As paging is continuous, presence or lack of a title-page is not crucial. Possibly it was left up to the inclination of the original purchaser to decide how he/she wished the work to be bound. Since volume II title-pages often vary from the title-page for volume I, a separate title-page for volume II may have been available to purchasers in case they wished the work bound in two separate volumes. Title-pages seem to have been reset several times for minor changes. The maps have been found in different states in various copies, thus it seemed more logical to list title-page transcriptions and maps separately, as it has not been possible, from the many copies seen, to link a particular corpus of maps to any particular edition. Because 18th-century title pages often could - and these did - run to extravagant length, full transcription has not been attempted. The title-pages are listed in what seems to be the proper chronological order; distinctive changes, clues to that order, are included. The maps are listed following the title-page listings, in their standard order of appearance, annotated to show changes in the plates.

#### I. Earliest edition?

##### **ESTC T95120**

*By the King's royal license and authority. A new royal authentic and complete system of universal geography antient and modern: including all the late important discoveries made by the English, and other celebrated navigators... And containing a complete genuine history and description of the whole world, as consisting of empires, kingdoms...&c. with the various countries, cities...throughout Europe, Asia, Africa and America... Together with their respective situations, extent...With an account of the religion, laws, customs...Also exact descriptions of the various kinds of beasts, birds, fishes...Likewise the essence of the voyages of the most enterprising navigators of different nations and countries from the celebrated Columbus...to the death of our...countryman Captain Cook...Together with a concise history of every Empire, Kingdom and State...To which is added a complete guide to geography, astronomy, the use of the globes, maps, &c... By the Reverend Thomas Bankes...Edward Warren Blake...and Alexander Cook...Enriched with upwards of one hundred beautiful engravings... London: Printed for J. Cooke, No. 17, Pater-Noster-Row. [1787?]*

This edition seems to be the first edition, as its title-page is the simplest, with only 53 lines, not including imprint; no columnar arrangements.

#### II. Next edition?

##### **ESTC T230585**

##### **ESTC T230586**

*By the King's royal license and authority. A new royal authentic and complete system of universal geography antient and modern. . . . Published By the royal licence and authority of His Britannic Majesty King George III. And containing...Captain Cook's voyages round the World...Together with those of all other modern as well as antient circumnavigators round the globe, particularly*

*those of Byron, Mulgrave, King, Clerke, Gore, Carteret, Wallis, Bougainville, &c . . . Enriched with upwards of one hundred and fifty beautiful engravings. . . [1789?]*

This title-page has 60 lines, not including imprint; no columnar arrangements; first 39 lines same as I, except for minor re-setting of type. The new information on Cook and other navigators dates it after no.I, as does the increased number of engravings. Same imprint.

### III. Third?

**ESTC N42026**

*A new, royal, and complete system of universal geography, antient and modern... Including all the late important discoveries made by the English, and other celebrated navigators...from the celebrated Columbus....to the death of our no less celebrated countryman Captain Cook... Likewise containing...Captain Cook's voyages round the world. Together with those of other modern circumnavigators, particularly Byron, Carteret, Wallis, Clerke, Gore, King, Forrest, and Willson. Also containing a particular account of the Pelew Islands, &c.... By the Rev. Thomas Bankes...Edward Warren Blake,...Alexander Cook,... and Thomas Lloyd. Embellished with near two hundred beautiful engravings... London: Printed for C. Cooke, No. 17, Peter-Noster-Row; and sold by the booksellers of Bath, Bristol, Birmingham, Canterbury, Cambridge, Coventry, Chester, Derby, Exeter, Gloucester, Hereford, Ipswich, Liverpool, Leicester, Manchester, Newcastle, Norwich, Nottingham, Oxford, Salisbury, Worcester, York; and by all other booksellers in England, Scotland, and Ireland. [1791?]*

This title-page has 55 lines, not including imprint. Lines 17 and 18 consist of four columns, two rows, listing empires, kingdoms, etc. The reference to Columbus and Cook has been moved from line 30 to line 10, and the statement of the authority of His Britannic Majesty has been removed. The change in the list of circumnavigators' names, the addition of Pelew Island, the addition of Thomas Lloyd to the list of authors, and the enlarged imprint would seem to date this edition later than the two previous ones.

### IV. Fourth?

**ESTC N42027**

*A new, royal, and authentic system of universal geography, antient and modern... In which is introduced, to illustrate the work, a considerable number of the most accurate whole sheet maps, forming a complete atlas...Also containing a particular account of the Pelew Islands. and the latest accounts of the English colony of Botany Bay; with a particular description of Port Jackson, where the convicts are now settled... Embellished with near two hundred beautiful engravings... London: Printed for C. Cooke...[30 cities, 1792?]*

This title-page has 59 lines, (most of which are quite similar to the one we have listed as the third edition) not including imprint. The columnar structure for empires, kingdoms... has been eliminated, but lines 20-22, listing countries, cities, towns, promontories, capes, bays, peninsulas, isthmuses, gulphs, rivers, herbours, lakes, mountains, volcanoes, deserts &c. are now arranged in four columns of three rows. The inclusion of maps, accounts of Botany Bay and Port Jackson, and the addition of Hull, Leeds, Northampton, Reading, Sherborn, Sheffield, Shrewsbury, and Winchester to the imprint indicate this is a later edition than the previous one.

### V. Fifth?

**ESTC N42049**

*A new and authentic system of universal geography, antient and modern... With a particular description of Port Jackson, Norfolk Island, &c. where the convicts are now settled... [1792?]*

This title-page also has 59 lines, and is almost identical to the one above, except that Willson is now spelled "Wilson", with one "n" and Norfolk Island has been added. Imprint is the same. Was this simply a new title-page to correct errors?

VII.Sixth?

**T210741**

*A modern, authentic and complete system of universal geography... Likewise containing...Cook's voyages. Together with all the discoveries made by other mariners since the time of that celebrated circumnavigator. Also, a particular description of the improved state of the new colony formed at Port Jackson and Norfolk Island...Including a particular account of the excursions and discoveries made in the interior parts of New Holland... By the Rev. Thomas Bankes... London: Printed for C. Cooke...[30 cities. 1797?]*

This title-page differs considerably from the previous one, having dropped "antient and modern" and reference to Columbus. Columnar structure now on lines 15-17. Only Bankes is listed as author. The references to the New Colony at Port Jackson and to New Holland indicate that this is the latest of the 18th-c. editions of Bankes's work.

Maps starred (\*) are from the same plates as those in Middleton's *New system of Geography*, which began publication in 1778, see entry **280**.

**ESTC T163339**

*A complete system of geography. Being a description of all the countries, islands [etc.]... of the known world... The whole illustrated with seventy maps, all new-drawn and engraved by Emanuel Bowen...brought down to the present time; preserving all that is useful in the fourth and last edition of the Complete Geographer, publish'd under the name of Herman Moll, &c.* London, Printed for William Innys, Richard Ware, Aaron Ward, John and Paul Knapton, John Clarke, Thomas Longman, Thomas Osborne, Henry Whitridge, Richard Hett, Charles Hitch, Stephen Austen, Edmund Comyns, James Hodges, Andrew Millar, John and Henry Pemberton, and John Rivington. M.DCC.XLIV. [1744]. 2v.

NOTE: Like most of the folio geographies published during the 18th-century, the states of the maps in the various copies seen differ, probably because these large works were usually published in parts, and were assembled from different batches of the engravings. The maps are described below in their several states, designated as A, B and C since it is not possible, at this point, to differentiate them chronologically.

List of publishers for Volume II, dated 1747, varies slightly: William Innys, Richard Ware, Aaron Ward, J. and P. Knapton, John Clarke, T. Longman and T. Shewell, Thomas Osborne, Henry Whitridge, Richard Hett, Charles Hitch, Stephen Austen, Edmund Comyns, Andrew Millar, James Hodges, Charles Corbett, and Jo. and Ja. Rivington.

*The general gazetteer: or, Compendious geographical dictionary. Containing a description of all the empires, kingdoms [etc.]...in the known world...* London: Printed for J. Newbery, in St. Paul's Church-Yard. MDCCLXII [1762]

**NOTE:** All except World map are same as those in Barrow's *Geographical Dictionary*, 1759, see entry **13**. Apparently Brookes had acquired at least some of the plates for that work and used them in the first six editions, with changes as noted. In 2<sup>nd</sup> and successive editions he substituted a map of the entire continent of North America for the one of part of North America used here.

Variant edition has imprint: J. Newbery, S. Crowder and Co. and J. Coote; G. Kearsley, and B. Collins.

This title, *Geography made familiar and easy to young gentle and ladies*, was first published by John Newbery as one of his important series of books for children and appeared as vol. 6 of the Circle of the Sciences. It went through many editions, some pirated. Some editions had a world map, some lacked the map. All editions located have been entered here in the event that some copy not noted as having a map may turn up with one.

*A new system of geography: or, A general description of the world. Containing a particular and circumstantial account of all the countries, kingdoms, and states of Europe, Asia, Africa, and America... Embellished with a new and accurate set of maps, by the best geographers... By D.Fenning...J. Collier... and others...* London: Printed for S. Crowder, at the Looking-Glass, in Pater-noster-Row; and sold by Mr. Jackson, at Oxford; Mr. Merrill, at Cambridge; Mess. Smith, in Dublin; and all other booksellers in Great Britain and Ireland. M DCC LXIV. [1764-65] 2v.

Fenning's *New System of Geography* appeared in five editions, 1764-1787. Dates for the several editions vary, e.g. title-pages have been seen for the first edition for 1764, 1765, and 1766, with the title-page for volume II usually dated a year previous to that for volume I. The same pattern has been seen for all subsequent editions. The corpus of maps, however, seems to have been fairly stable, although variant maps have been found in most copies seen, which may relate to the fact that these folio editions (Bowen, Bankes, and Middleton as well as Fenning) were issued in parts and assembled by purchasers.

NOTE: Maps starred (\*) same as those in Barrow's *New Geographical Dictionary*, published 1759-60. See entry **13**. These maps show evidence of erasure (TC,ab) where Engraved... had been on the maps in Barrow. In many cases additional degree lines have been added.

**Gordon, Patrick**, d. 1703?

NOTE: Gordon's geography was published in 20 editions, from 1693-1754 in London. Several Irish editions have been located between 1739 and 1760. During this time, three sets of maps were used. The original maps, dating back to the first edition of 1693, originally appeared in Robert Morden's *Geography rectified*, and were used for all editions until 1722. With that edition, the 9th, a new set of maps by John Senex was introduced and these maps were used for 9th-19th editions, 1722-1749. In attempting to recoup the market lost by this time to Thomas Salmon's *New geographical and historical grammar*, a new set of maps by Emanuel Bowen was introduced but this did not suffice, and the 20th was the last edition of Gordon to appear.

*Geography anatomiz'd... The fifteenth edition...a set of new maps, by Mr. Senex...* Dublin: Printed by R. Reilly, on Corkhill, for G. Risk, G. Ewing, W. Smith, and P. Crampton, in Damestreet, and G. Faulkner, in Essex-street, booksellers. M DCC XXXIX. [1739]

17 maps. With the exception of the map of Europe, which has a decorative cartouche, all the maps are line-for-line copies of the English Senex maps, including titles, but are not from same plates. Page numbers have been corrected to match new locations, as noted below. The copies must have been made from a pre-1735 copy of the English edition, as the map of Germany follows the pre-1735 delineation.

**EDITIONS OF THE NEW GEOGRAPHICAL, HISTORICAL, AND COMMERCIAL GRAMMAR**

This publication had a long life, going through eighteen London, at least three Irish, and one Scottish edition in the 18th-century and continuing with several more in the 19th. Guthrie seems to have published it in two forms: a one-volume edition with small maps and a two-volume edition with large maps, although two-volume editions with the small maps exist. Over the years the *Grammar* increased in size, and became unwieldy in a one-volume format. Apparently a title-page was made available so that the work could be split into two volumes, in which case the pagination was continuous. The maps in the "normal" two-volume edition were later used in the quarto editions of the geography, with title *New System of Modern Geography*.

**Guthrie, William.**

*A new geographical, historical, and commercial grammar...with a new and correct set of large maps... A new edition...* London: Printed for J. Knox, in Paternoster Row. M DCC LXXXIII [1783] 2v.

NOTE: This edition is a puzzle. Is the date a misprint for 1773? 1778? It is a two-volume work, with the large maps, but the date is problematical. Knox apparently left London to retire to Scotland ca. 1777. There are no books with his imprint after this date. Also, he does not appear in any of the directories as having been located in Paternoster Row, but George Robinson, who took over the publication of Guthrie's *Grammar* with Edward and Charles Dille, did. (See Maxted, p. 191)

(copy found only at St. Andrews; not on ESTC. Is this title-page an error, later corrected, for the 2nd ed. of 1771? On pg. [490] is found "A new edition, being the third, of this Book, neatly printed in one large Octavo Volume, illustrated with a Set of small maps..." Same as on pg [490] of 2d ed., 1771 and seems to be identical.)

NOTE: 25/26 maps (some copies seen have two maps of France); 24 maps same as 15th edition, two new plates added, and plate numbers have been added to all maps, as shown below. Were plate numbers added to distinguish between eds. of 1795 and 1796? Text seems exactly the same in both.

The armillary sphere is plate II, causing discrepancy between plate #s and position #. J. Russell's name very faint on many maps; wear from having been lightly engraved?

## IRISH EDITIONS

The Irish editions are difficult to discuss with any degree of certainty. Four have been identified; three of these have been seen - 1771, 1780, and 1794 - only one of which has been seen in multiple copies (1794), one of which has not yet been located (1789), and one (1780) in which all maps were torn or missing in the only copy located. The edition numbers given, except for 1771, do not jibe with those of the London editions of the same date, and it is not understood whether they represent a run of Irish editions which have not survived, or whether they are copied from the corresponding London editions.

## EDITIONS OF THE NEW SYSTEM OF MODERN GEOGRAPHY

This publication is essentially the *New Geographical, Historical, and Commercial Grammar* in quarto with large maps. The first edition, in 1780, used nine of the ten maps which appeared in the 1771 two-volume edition of the *Geographical...Grammar* and added 11 others. The only map from the earlier edition which was not used was that for the West Indies, for which a new, larger map was prepared. Six London, one Dublin, and an American edition appeared between 1780-1795.

*Guthrie's Universal geography improved: being a new system of modern geography... A new edition, enlarged, corrected and improved, with great additions... Illustrated with a set of large and accurate maps.* London: Printed for the proprietors; and sold by all booksellers in town and country. MDCCXCV. [1795]

NOTE: A strange edition - why the imprint change? Is this really a pirated edition? Dilly and Robinsons still publishing at this time, and Robinsons and Mawman, Dilly's successor, published later edition. Also, the maps are not from any of the previous editions; 20 - omitting only the maps of England, Scotland, Ireland, and a World chart - had appeared in Seally's *A Complete Geographical Dictionary* in 1781-83, all then attributed to J. Cary. Cary's name has been erased from some of the maps, and all publication information has been erased.

### IRISH EDITION

188.

**Guthrie, William.**

**ESTC N31605**

*An improved system of modern geography: or, A geographical, historical, and commercial grammar...Originally compiled by William Guthrie, Esq. A new edition... inscribed, by permission, to the Royal Irish Academy. Illustrated with a set of large and accurate maps.* Dublin: Printed by John Chambers, No. 5, Abbey-Street. M.DCC.LXXXIX [1789]

NOTE: No copy with maps has been found. "Directions for placing the maps and plates" includes 25 maps, but has note "Although these directions are given for placing the maps, yet it is recommended to have them bound separate, as their number and size render the consulting them in the book inconvenient and injurious." Probably this injunction was followed in most cases. In general, the list of maps follows those included in the London edition of 1786, with the following exceptions: maps of British Colonies and United States omitted, and maps of North Pole, Switzerland, and North America added.

### AMERICAN EDITION

189.

**Guthrie, William.**

## EDITIONS OF THE *Geography for Children*

This very popular little book for school children, with a world map, went through numerous editions in London, Dublin, and even Philadelphia. Copies are now very difficult to find, an indication that the book was quite literally read to death. It may have gone through as many as twenty-five editions, although several could prove to be “ghosts.” Its popularity can be seen in the fact that at least two editions, entries 235 and 236 are pirated editions with spurious imprints. All possible editions are noted below, whether seen or not, in the hope that they may eventually be proven to exist.

Like many of the other 18th-century folio-sized geographical works, Middleton's *New and Complete System of Geography* was issued in parts, and is a bibliographical nightmare. The title-pages in similar volumes by Thomas Bankes, q.v., closely resemble in both wording and lay-out those in Middleton and may well have been intended as successors to Middleton's work. 13 map plates first used here in Middleton later make their appearance in Bankes's publications. Some of the Middleton title-pages carry dates; some do not. But they seem to have been published within a fairly short span of years, 1777-1782. The title-pages of the numerous copies seen frequently vary. The initial wording is the same, but type-settings, lay-out, and dates are not. Most copies were undated; on dated copies, dates ranged from 1777-1779; often vol.I date was later than vol. II. All imprints are J. Cooke.

Of the sixteen copies examined, all had six maps in vol. I, and 14 or 15 in vol. II; the map of South America was frequently lacking and not called for on the list of plates. During this time the map plates underwent changes - decorative cartouches were removed, dates were erased, and new geographical information was added, particularly in the Pacific area, to reflect information received from the voyages of Capt. James Cooke and others.

It seems logical, therefore, to treat the Middleton editions as we did those of Bankes, i.e. by giving the title-page first and listing the maps following in the various states found. No two copies seen have the same corpus of maps attached to the same title-page, and other variants may exist.

*An introduction to astronomy, navigation, and other mathematical sciences made easie by the description and uses of the coelestial and terrestrial globes...* London, printed for R. Morden at the Atlas in Cornhill; and R. Smith, under the Piazza's of the Royal Exchange, 1702.

Note: one map, the same world map as in Morden's *Geography rectified*, q.v., but with page number 86 & 87 in the cartouche. Does this mean it was printed after the 1702 Gordon, which lacked the numbers, but before the 1704 Gordon, in which they had been added?

[Payne, John].

ESTC T174284

*A new and complete system of universal geography: containing a full survey of the natural and civil state of the terraqueous globe: exhibiting all the latest and most authentic information concerning Europe, Asia, Africa, and America... and a philosophical view of universal history; the last article written by Robert Heron. In two volumes...*

Edinburgh: Printed for R. Morison and son, booksellers, Perth. 1796. 2v. in 4; pagination continuous within volumes.

NOTE: Many of the plates (marked with an asterisk) were used for the Montrose edition of Guthrie's *New Geographical...Grammar*, 1799, entry **176**, with some name and date changes. In various copies seen, maps have been found in different states, i.e. with date changes, names changed or erased. Where they have been encountered these changes have been noted within square brackets. Other variants may still be found.

*The modern gazetteer: or, A short view of the several nations of the world. Absolutely necessary for rendering the public news, and other historical occurrences, intelligible and entertaining... The fifth edition, with additions.* London: Printed for S. and E. Ballard, D. Browne, C. Hitch and L. Hawes, A. Millar, J. Hinton, John Rivington, J. Robinson, R. Baldwin, S. Crowder and Co., W. Johnston, P. Davey and B. Law, T. Longman, and M. Cooper. MDCCLVIII. [1758]

NOTE: This popular little gazetteer went through a number of editions, of which this is apparently the first to contain maps, although many copies seen lacked the maps. Maps have not been found in set locations; in many cases they are batched together at the beginning or end of the text; in other cases they are found randomly distributed; in only a few cases have they been found at the appropriate place in the text, so page locations have not been given here. All maps same as those in the 1749 or 1756 editions of his *New Geographical and Historical Grammar*.

*The universal gazetteer: or, a short view of the several nations of the world... The tenth edition...with a new set of maps.* London, printed for J. Gardner, and R. Gray; and Patrick Anderson, Edinburgh. 1777.

NOTE: Pirated edition? Gardner and Gray have not been associated with this publication earlier, and there is only a brief mention of their names in Maxted; there is no listing for Patrick Anderson in Plomer. The seven maps - World, Europe, Germany, Asia, Africa, North America, South America - seem to be a mixed set from the two variant Edinburgh editions of Salmon's *New geographical and historical grammar* . . . 1767; see entry **364**. For the "real" 10th edition, see entry **339**.

**IRISH EDITION**

The Irish editions of *Modern History* have not been sorted out. ESTC lists vols. 1-9 at Bowdoin College, 1724-1728 - to be investigated. ESTC also notes existence of vols. 1,4 (two editions?) and 5, 1727-1739 at the NLI in Dublin. I did find a 5-vol set, 1739-1755, described below. ESTC #s still to be sorted out.

*Modern history: or, The present state of all nations...In six volumes...with one hundred and forty five maps and cuts. Vol.I. Containing the present state of Asia... Illustrated with thirty four curious copper-plates...by Herman Moll.* Dublin: Printed for William Williamson, bookseller, at Mecaenas's Head in Bride-Street. MDCCLV. [1755-1739] 5v. in 6

NOTE: Imprint of vols. 2-5: Printed by and for George Grierson, printer to the King's most excellent majesty, at the King's-Arms and Two Bibles in Essex-street. 1739. All maps are close copies of those in English edition, but not from same plates. Two copies seen have slight differences, here distinguished as State A and State B as there is no way to order them chronologically. In cases where two states have not been found, can we postulate that they existed? Early state may have had volume and page location noted on maps; in a later state these were erased, and the two alphabetical series and plate numbers added. Some plates have had descriptive text added, but it is not clear at what stage these descriptions were added. Were several engravers involved? Titles, letters and numbers seem done very crudely, but the descriptive texts have been done in a much more delicate, italic hand. In two copies seen, most maps have been bound together, at end of each volume. ESTC numbers have been found for volumes 2,4, and 5, and have been noted on the entries for those volumes.

Salmon's most enduring publication was his *New Geographical and Historical Grammar*, which first appeared in 1749 and went through 14 London, 8 Scottish, and 3 Irish editions by the end of the century. Enumerating the maps in the English editions is straight-forward. The maps in Scottish editions are more complex, doubtless due to the less comfortable economic climate, perhaps making it necessary to scrounge for available maps. Surprisingly, there has been agreement among copies of the Irish editions seen.

### SCOTTISH EDITIONS OF THE *GEOGRAPHICAL GRAMMAR*

There seems to be some variation in the copies seen of the Scottish editions of the *Geographical Grammar* as compared to the English. This variation has also been noticed in other Scottish geographical publications and has been noted in their descriptions. Was the book trade less well organized than the trade in England? Were economic considerations behind using different maps in different copies of the same title? Sorting out the "standard corpus" of maps has proven difficult and frustrating. The answer may be that there was no "standard corpus", and maps used in any publication were those that came to hand.

*A complete geographical dictionary, or universal gazetteer... The second edition.* London: printed for J. Scatcherd and J. Whitaker; and John Fielding. [1790?] 2v.

NOTE: ESTC states "Frontispiece dated 1781, but probably a reissue of 1787 edit." There is some confusion about editions, because the 1782/83 ed. should be first, and 1787 second.

*The lady's encyclopedia: or, A concise analysis of the belleslettres, the fine arts, and the sciences, in three volumes. Illustrated with ...thirty-four maps...* London: Printed for J. Murray, No. 32 Fleet Street, and W. Creech, Edinburgh, M.DCC.LXXXVIII [1788] 3v.

NOTE: All maps in vol. III, and although title-page of vol. I calls for thirty-four maps, the title-page for vol. III calls for only 16; 17 were actually included. All have imprint: Publish'd Augst. 29th 1783 by J. Fielding No. 29 Pater-Noster-Row (BC,bb). The maps are very close copies of those by J. Cary for Seally's *Complete Geographical Dictionary*, but redone by J. Lodge and simplified for a schoolgirl's use - almost outline maps, with only major place names given.

NOTE: Is this is called second edition because it follows the first Dublin edition of 1788? See entry **447**. Or is there an as yet undiscovered London first edition? Curiously, neither copy seen contains a map of the United States although the Dublin edition, in which all of the maps were copies of this London edition, does.

## GEOGRAPHIC INDEX

Arrangement of this index is geographical/chronological. Main entry number is in bold. In the case of works which have gone through several editions, the map location given is for the first edition; map locations in later editions may vary. World charts and maps of the ancient world are indexed, but other world maps are not since virtually every work cited contains, if nothing else, a world map.
